CULTURE

Every packet of flower seed has culture directions printed on the packet. In sowing flower seed, most kinds require shallow sowing. Cover the seed just as lightly as possible when seed is fine and do not allow it to dry while sprouting. Our Plant Sprinkler listed on page 6 is ideal for this purpose and we have priced this almost at cost so everyone can take advantage and own one, which will last for years. To keep seed in prime condition, many are put up in glassine packets and these should not be opened until ready to plant. This extra care we give seeds in handling may mean your success when you have failed in the past at growing some particular kind you have wanted so badly.

This is one of the most vigorously growing annuals, and can be used to fill up large gaps in the border. The plants grow with a single stem, which develops wide spreading branches, each of which terminates in a profuse raceme of golden blossoms. It is a tender perennial which we grow as an annual. Wonderful Weather Plant

The Unique Floral Barometer

If the leaves stand upward from the twig, weather should be beautiful. If they stand out straight, changeable weather is expected. As the leaves droop, the indications range toward rain, when the leaves hang straight downward, water may be expected to fall in torrents. A local storm is indicated by the curling together of the leaves, and a fog by the bending of the twigs. Seeds are of good size and sometimes slow to germinate; should be soaked in lukewarm water before planting. Pkt. 10c; 3 for 25c. Postpaid.

Marvelous Cut Flowers

NEW & BEAUTIFUL ZINNIAS

Star Dust

FANTASY STAR DUST—A lovely golden yellow. Informal shaggy-petaled, medium size flowers on plants 2½ to 3 ft. high with stems good length for cutting. Free blooming. Marvelous variety for bouquets. Pkt. 15c; 3 for 40c, postpaid.

Fantasy or Chrysanthemum Flowered Zinnia

Probably the most fascinating new type of Zinnias introduced to the floral world in many years. The very informal shaggy appearing flowers are graceful and interesting, very distinct from the stiff, formal zinnias to which we are accustomed. The fascinating shades of orange, pinks and creams give beauty to this remarkable plant. Mixed colors only. Pkt. 10c; 3 for 27c, Postpaid.

Desert Gold

This striking new Zinnia Desert Gold contains all the rich yellow and golden shades of the Crown of Gold Mixture that was offered a few years ago, but in our opinion surpasses this variety by far so that we are not listing it now. Desert Gold is of a Giant Dahlia Flowered type, the flowers often measuring 5 inches across. Pkt. 10c, 3 for 27c, Postpaid.

New Scabiosa Zinnia

Among the oddest and most attractive Zinnia forms the Scabiosa Flowered type deserves to be more widely grown and better known than at present. The flower bears a close resemblance to the annual scabiosa from which they get their name. Grows 2 to 2½ feet high. Colors mostly crimson, scarlet, orange, yellow and pink. Flowers double. Pkt. 10c; 3 for 27c, postpaid.

Curled and Crested Zinnia

The petals are elegantly twisted and curled, giving the flower a most attractive appearance. The plant grows 18 inches high by 2 to 2½ feet in diameter, and blooms freely until killed by severe frost. The colors range from white through many shades of yellow, rose, pink and salmon to deepest crimson. The new Curled and Crested is a grand cut flower which will last a considerable time in water. Pkt. 10c, 3 pkts. 25c. Postpaid.

Giant Double Quilled

The petals are quilled somewhat on the appearance of the Cactus Dahlia. Very attractive variety. Mixed colors only. Pkt. 9c; 3 for 24c; ¼ oz. 34c. Postpaid.

NEW MONARCH WAX

Our New Monarch Wax Bean is a very sturdy and vigorous grower and as near rust proof and disease resistant as it is possible for a bean to be. One of the earliest wax beans ever grown, starting to bear within 60 days after planting and continues its bearing season longer than most others. Pods are of splendid quality, fleshy, and are stringless at practically all stages of their growth. From 6 to 7 inches long by ½ inch through and almost round, they make a wonderfully heavy yield, and the beautiful golden yellow color sells them easily. Seed is long, oval, medium size and purplish black color. In common with other black-seeded varieties, this bean may be planted quite early in the season. Practically rust proof, owing to the habit of the plant which branches freely but is perfectly sturdy and upright, every branch carrying a head of magnificent pods. As nearly all of the pods are produced underneath the foliage, excessive heat does not affect it in the least, a very valuable feature whether grown for home, the market garden or for shipping long distances. As a canning bean New Monarch is without an equal, as the pods are long enough to fill the jar and the beautiful color is retained after cooking. Postpaid, pkt. 5c; ½ pt. 20c; pt. 37c; qt. 69c; 5 qts. \$3.25.

These may be planted in rows 2 feet apart with 20 inches between the plants in the rows. One ounce will produce about 25 hundred plants.

One-half pound of seed will grow enough greens to feed about 1,000 hens for 4 months; 3 pounds to an acre for 6,000 hens for 4 months. Poultry Cabbage is a rapid grower. In the Northern States the seed can be sown any time from early spring until the middle of July. In some parts of the South the seed may be sown throughout the entire year, or from July to September for main crop. Sow in rows 24 inches apart, allowing about 2 inches between the seed. Commence feeding when plants are about 4 inches high, pulling out and feeding alternate plants. Continue thinning until plants are about one foot apart. These should make heads of 5 to 7 pounds in 60 days and may be fed immediately or allowed to stay in the ground until cold weather. These heads may be fed whole as they are very tender and 100 per cent edible. Chopping is not required even for young chickens. Poultry Cabbage will not discolor the yolks of eggs when fed to laying hens. Pkt. 10c; oz. 20c; 1/4 lb. 60c; 1/2 lb. \$2.00, postpaid.

MUSHROOMS

EASY TO SELL FUN TO GROW

HOW TO PREPARE A BED—

Mushroom beds may be made in a warm, dry cellar, or in any building where the frost does not penetrate, and in the open air during the summer and fall months. Having procured the spawn, the next thing to be attended to is to make preparations for the beds. About a fortnight or three weeks before the beds are to be made collect a quantity of fresh horse manure without the straw; place it in a heap under cover, and as it heats keep turning it over once or twice a week, until the fiery heat has become exhausted, which will require from ten to fourteen days' time. When the manure is in a condition to be made up, lay out your bed according to your requirements, say three feet wide, ten feet long, and from two to three feet deep; beat it well down with the back of the spade as the process of building goes on. When the bed has been made some time, say a week or thereabouts, and the heat sufficiently declined to a temperature of 65 or 75 degrees, the spawn may be put into it. Cover spawn with two inches of rich soil. When soil looks dry, give a gentle watering with tepid water, using a hose or watering-can.

Large Red Wethersfield

Deep Purplish Red Color. Mild, Good Size, Flat.

The bulbs are large, flattened, but quite thick, with rich dark purplish skin and pure white flesh of good mild flavor. Our stock is saved from carefully selected bulbs only, and produces larger crops than any other American red onion and these bulbs keep better than those of any other sort. Our strain of Red Wethersfield is the earliest and most prolific known, and has proven a great money-maker to the grower. Postpaid, pkt. 5c; oz. 18c; ¼ lb. 65c; ½ lb. \$1.20; 1 lb. \$2.22; 2 lbs. \$4.20.

Yellow Globe Danvers

Our strain of Yellow Globe Danvers, developed by careful selection and breeding, is pedigreed stock of the highest type, far superior to the seed mostly offered by others. This stock produces bulbs of fine symmetrical shape, large size, average specimens weighing from 1 to 2 lbs. each. These bulbs have small necks and ripen evenly. The skin is a light golden brown; the flesh is finely grained, pure white, crisp, mild and of excellent flavor. It is a grand, magnificent keeper and shipper. Frequently produces 800 bushels or more to the acre from seed. About a week earlier, but not quite so large nor so perfectly globe-shaped as Southport Yellow Globe Postpaid, pkt. 5c; oz. 20c; ¼ lb. 84c; ½ lb. \$1.66; 1 lb. \$3.22; 2 lbs. \$6.35.

White Welsh (Bunching)

Does not form a large bulb, but the thick white shoots are used for bunching and early green Onions. Perfectly hardy, mild, and very early. Pkt. 5c; oz. 20c; ¼ lb. 84c; ½ lb. \$1.66, postpaid.

New White Portugal or White Silverskin

The Standard White Onion for Market and Family Use.—Medium size bulbs of flat shape, which ripen evenly and quite early—about 10 days earlier than Southport White Globe. They are of handsome appearance; have a clear white skin as beautiful as glistening silver. The flesh is of mild, delicious flavor. For keeping, this is the best of all white varieties.

A gardener who does not care to plant more than one variety should use this one, and everyone should make a liberal sowing of it for continuous use. These Onions make fine bunching of Green Onions and are also grown for the market as large White Onions. They are also much used for pickling and for Onion Sets. Postpaid, pkt. 5c; oz. 18c; ¼ lb. 65c; ½ lb. \$1.20; 1 lb. \$2.22; 2 lbs. \$4.20.

Mammoth Silver King

The King of White Onions—Its Mildness of Flavor and Tenderness Are Unsurpassed.—The largest white Onion. Grows to a remarkable size—average diameter is from 5 to 7½ inches. Single bulbs often attain weights of over 4 pounds each. There is no other white Onion which attains such mammoth size. The shape is flattened, but thick through. The skin is of a beautiful silvery white. The flesh is of a snowy white and is of a particularly mild and pleasant flavor. Being a sure cropper, producing immense Onions and enormous crops which bring the highest prices, this variety has been a great moneymaker for the grower; but its fine, mild flavor makes it also most desirable for the private gardener. Postpaid, pkt. 5c; oz. 18c; ¼ lb. 65c; ½ lb. \$1.20; 1 lb. \$2.22; 2 lbs. \$4.20.

A New Dwarf Extra Early Pea of Unusual Value, in Enormous Demand Among Market Gardeners. We are sure that as soon as a gardener becomes acquainted with this variety he will quit growing the old varieties. In season this new sort ripens with the American Wonder, while the pods, usually borne in pairs, are more numerous, larger and contain one or two more Peas. Its two striking features are: The beautiful dark green color of the pods and its great keeping qualities, when ready for the table staying in excellent condition for a week longer than other similar earlies. Little Marvel is an extraordinary cropper, and although the pods are only of medium size, it is fully as productive as most larger podded kinds. Vines 15 inches high; pods in pairs 2 1/2 to 3 inches long, square at bottom, jammed with 6 to 8 quite large, deep-green wrinkled Peas. AMEER—WILT-RESISTANT

This is a cross between Alaska and a large podded wrinkled pea and is sometimes called Large Podded Alaska. In comparison to Alaska, it is 2 or 3 days later, equally as hardy, dwarf upright vines completely laden with pods twice as large, that may be picked in one-half the time. It is resistant to Fusarium wilt, which makes it a most valuable variety for wilt infested areas. Due to its quality, earliness, size and productivity, and to the fact that two pickings market the entire crop, gardeners who plant for early market will find it a money maker. Postpaid, pt. 5c; 1/2 pt. 18c; pt. 32c; qt. 52c; 5 qts. \$2.49.

POTLATCH OR BIG DINNER

The Best Main Crop Variety of Large Podded Dwarf Peas

Potlatch is Chinook Indian for Big Dinner. The vines are sturdy and vigorous, growing about 20 inches high, with coarse and unusually dark green foliage which can be distinguished from that of other peas a quarter of a mile away. They are broad, pointed, rich dark green in color and in size and fullness fully equal to those of the Tall Telephone Pea. They contain 9 to 11 Peas, which are very large and in sweetness and flavor rank with the finest. Potlatch is a wonder of productivity and the way the Peas shell out is astonishing. On account of its large, beautiful pods and enormous productivity, is a great favorite with market gardeners, and owing to delicious quality one of the best for the table. Potlatch is a second early, dwarf, very large podded Pea; it has become the leading and most popular variety of its class. Postpaid, pkt. 5c; 1/2 pt. 17c; pt. 29c; qt. 49c; 5 qts. \$2.35.

The Vines are of pale green color and bear in great profusion from top to bottom immense round, dark green pods, 4 1/2 to 5 inches long, well filled with from 8 to 10 or more Peas of delicious quality as large and as rich in flavor as the Telephone Peas, and these Peas can be had only a few days later than the small extra early Peas. Cocozelle, Italian Vegetable Marrow or Summer Asparagus

COCOZELLE (Italian Marrow or Summer Asparagus) is one of the most delicious additions to the Squash family. For piquancy of flavor, tenderness and general palatability it has few equals. This plant does not make a vine, but grows in the form of a compact bush, and 5 or 6 hills is sufficient for a large family. The oblong green fruits should be picked when not more than 4 to 6 inches long. If the fruits are allowed to grow larger they lose their delicacy of flavor, and when one fruit is allowed to mature it checks the formation of any more fruit on the plant. The fruits form and grow rapidly and may be picked almost every day until frost. If planted early it will fruit from the latter part of June until October. Can be cooked like Asparagus or Squash, and most excellent when prepared like French fried potatoes. Postpaid, pkt. 8c; oz. 15c; ¼ lb. 35c; ½ lb. 65c; 1 lb. \$1.20; 2 lbs. \$2.30.
